DIARRRHEA

- CAUSES & NATURAL REMEDY -

Dr. Bestman Anyatonwu

MEANING

Diarrhea — or loose, watery bowel movements that occur more frequently than usual — is one of the most commonly reported ailments in the United States (second only to respiratory infection), according to the American College of Gastroenterology (ACG). While diarrhea does not typically cause serious complications for most patients, it can be a fatal ailment for young children, especially those who are malnourished or have compromised immune systems, according to the World Health Organization (WHO).

CAUSES

About of diarrhea that lasts no more than two weeks is referred to as acute diarrhea and is most often caused by a viral infection, according to the ACG. The most common diarrhea-causing virus for adults is norovirus, which is often referred to as "cruise ship diarrhea" due to its unfortunate tendency to infect sea-faring vacationers. Rotavirus, another diarrhea-inducing virus, is very common in young children.

A final common cause of acute diarrhea is parasites, which can be ingested when a person consumes contaminated food or water. Diarrhea that lasts longer than four weeks is known as chronic diarrhea. Like acute diarrhea, chronic diarrhea has many causes. These causes include:

- Infectious causes (most commonly parasites)
- Osmotic and malabsorption causes (which result in too much water being absorbed into the bowel), such as Celiac disease and lactose intolerance
- Inflammatory causes, such as ulcerative colitis or Crohn's disease
- Intestinal ischemia, or lessened blood flow to the intestine
- Certain cancer therapies, like radiation
- Certain medications, such as antibiotics

Complications

"Diarrhea can be nothing to worry about, or it can be potentially life-threatening," who explained that the underlying cause of a patient's diarrhea is what determines the seriousness of this uncomfortable ailment.

The primary complication of diarrhea is dehydration caused by the loss of large amounts of water, salt and nutrients. Dehydration can lead to other serious conditions such as low blood pressure, seizures, kidney failure or even death. Those with ongoing diarrhea should seek medical attention if they experience:

- Dark urine or small amounts of urine
- Rapid heart rate
- Dry, flushed skin
- Headaches or light-headedness
- Fatigue
- Irritability or confusion
- Severe abdominal or rectal pain
- Blood in the stool or black, tar-like stools

NATURAL REMEDY

Libracin detoxification herbal alternative is the answer:

A. Libracin Herbal Pill > <http://libracin.com/product/libracin-herbal-pill/?ref=19>

B. Neem Tea > <http://libracin.com/product/neem-tea-plus-vernonia-bitters/?ref=19>

C. Nutri-Shield > <http://libracin.com/product/nutri-shield/?ref=19>
